

KlaxonAmp Horn Operating Instructions

The KlaxonAmp Horn is a combination speaker and amplifier designed to be used with the COUNTDOWN TIMER CONTROLLER. This combination provides a horn blast whenever the count on the COUNTDOWN TIMER CONTROLLER reaches 00, or at any time when the red button on the CONTROLLER is pressed.

The KlaxonAmp Horn requires its own 110 VAC power source. It is best to plug this power source in as the *last step* in the installation process. Unplugging it should be the *first step* in the tear-down process.

Signal to the KlaxonAmp Horn comes through the shielded cable with the ¼" monaural connector. Plug this connector into the ¼" jack on the side of the COUNTDOWN TIMER CONTROLLER.

Caution: Do not attempt to use the KlaxonAmp Horn for any other type of sound reinforcement (a PA speaker, for example). It is not designed to provide that type of service.

Position the KlaxonAmp Horn where it can best be heard. If it is desirable to muffle the sound somewhat, the KlaxonAmp Horn can be situated face down to block off some of the sound output.

The installation is now complete and ready for operation.
